

HÖLLENBLITZ

Der Faust

Press text

Logistic challenge

The entire ride weighs 600 tons, and it is dismantled and reassembled with our own truck-mounted crane. If the moving time between two locations is short, up to three additional truck-mounted cranes can help out.

With 30 truck trips, the entire "Höllেনblitz" is implemented. That means: special permits for certain roads and trips on weekends - a lot of paperwork. And in each state, there are different regulations.

Usually, enough time is planned between two venues, but the record is only four days. The well-rehearsed team consists of 30 employees, even at a height of 20 meters they assemble the heavy steel parts with great sensitivity to the centimetre.
